

PET RFID Card

PET stands for polyethylene terephthalate, which is a plastic resin and form of polyester. PET cards—or Composite PVC-PET cards—are made up of a combination of PVC and polyester that’s highly durable and heat-resistant. Typically made of 40% PET materials and 60% PVC, Composite PVC-PET cards are constructed to be stronger and to withstand high heat settings, whether you laminate or print with retransfer ID card printers.

Composite PVC-PET cards are usually a little more expensive than the standard PVC cards

■ Applications

Access Management | Hotel Resort | Loyalty Process | Promotion Gift

■ Personalization Support

CMYK Offset Printing | Silk-screen printing | UV printing | Laser printing | Magnetic Stripe | Signature Panel | Serial Number or UID printing | Hi-co mag stripe, Barcode/QR | Chip encoding

■ Specifications

Tag Type	PET RFID Card
Tag Dimensions	86*54mm or customized
Thickness	0.84~0.88mm
IC Type	LF/HF/UHF
Material	PET Matrial
Warranty	One Year

■ Advantages

- Professional manufacturer for more than 20+ years in the card industry
- Very first standardized contactless card manufacturer in China
- High tech R&D for customized RFID products
- Accepting complex personalization operations
- Extensive know how in the card manufacturing technology
- Competitive pricing and fast delivery times
- Successful cooperation with leading chip manufacturers like NXP, Infineon, EM, TI and others
